

view::entity::GhostView
::GhostView

view::entity::GhostView
::onNotify

util::TextureManager
::getGhostFrames

```
graph LR; A["view::entity::GhostView  
::GhostView"] --> C["util::TextureManager  
::getGhostFrames"]; B["view::entity::GhostView  
::onNotify"] --> C;
```

The diagram illustrates two function calls to `util::TextureManager::getGhostFrames`. The first call originates from the `view::entity::GhostView::GhostView` constructor, and the second call originates from the `view::entity::GhostView::onNotify` method. Both calls are represented by blue arrows pointing to a gray box containing the target function signature.
